Proposed Solar Ordinance

🖨️ 📄 Close Fullscreen ☆

To: enoble@klamathcounty.org

Reference your proposed Solar Ordinance sent to me on 15 July 2021. I do have one comment to make per XX.040 - General Review Standards, paragraph 5. My land (approx 20 acres) is located on the NE corner of the intersection of Reeder and Crystal Springs Roads. It is currently zoned EFU-4. It is a very flat piece of acreage and might (emphasis on the "might") be of interest to some entity looking to build a commercial solar farm.

As I'm sure you are well aware, I, like so many people in the Basin have been left with no water this year. The result is I have been unable to grow any hay for my livestock. Will we get water next year? Will we ever get water again? While I continue to have faith in "Mother Nature", I have little or no faith in the political process in this state or country. Without water there is little reason to zone anything EFU. I am asking that there be a provision in the proposed ordinance that would allow landowners the ability to develop their land as they see fit in the event they are denied water on a "long" term basis. In other words, let me support my family in other ways if ranching/farming goes the way of the timber industry.

I appreciate the opportunity to express my comments on the County's proposed Solar Ordinance. Thank you.
